

VP4

Automatic Voltage Regulator

Shown Actual Size! (4.1" x 2")

VoltPro's VP4 Automatic Voltage Regulator is an extremely compact design, engineered to provide reliable service and replace a library of OEM and aftermarket voltage regulators.

Due to its diminutive size, the VP4 is capable of mounting nearly anywhere inside the generator control panel, and can replace even the smallest OEM regulators without having to modify the existing housing or control panel!

The VP4 is designed for easy installation, easy setup, and high reliability in the field. A simplified design requires only 4 wires (2 sensing/power, and 2 field) and a single adjustment! The fully encapsulated design ensures that the VP4 is tolerant of even the harshest operating conditions. All VoltPro products are **PROUDLY MADE IN THE USA!**

Product Features:

- Half-Wave rectified, 120V or 240V operation, adjustable
- 4A Continuous rating
- .5% Regulation accuracy NL-FL
- <.5% Thermal drift 0°C – 60°C
- Idle protection circuit prevents building full voltage at idle
- Compatible with 50 or 60Hz generators
- Single adjustment setup procedure
- Encapsulated design for extreme reliability in tough installations
- Compact size
- Passive cooling doesn't require forced air for reliable operation
